Degenerative nervous system diseases include multiple sclerosis and Alzheimer's disease. Hypersensitivity diseases include Typs I hypersensitivities such as contact with allergens that lead to allergies, Type II hypersensitivities such as those present in Goodpasture's syndrome and Type IV hypersensitivities such as those manifested in leprosy. Infectious diseases include viral infections caused by viruses such as HIV, fungal infections such as those caused by the yeast genus Candida, parasitic infections such as those caused by schistosomes, filaria and bacterial infections such as those caused by schistosomes, filaria and bacterial infections such as those caused by schistosomes, filaria and bacterial infections such as those caused by Mycobacterium. Neoplastic diseases include lymphoproliferative diseases such as leukaemias, lymphomas and cancers such as cancer of the brain, breast. The present sequence represents a Vbeta PCR primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; ss; PCR; secreted protein; transmembrane protein; PRO; cytostati ophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem articular cartilage defects; osteoarthritis; rheumatoid arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to novel single nucleotide polymorphisms within the human CARD4 gene. Specifically, it refers to allelic variants of CARD4 (NOD1), a member of the CED4/Apaf-1 family that is involved in caspase-9 induced apoptosis and inflammation. The present invention describes a kit for determining the allelic variants of CARD4 polymorphic regions of an individual, which can be useful for predicting susceptibility, as well as diagnosis, prevention and treatment of various disorders including chronic obstructive pulmonary disease, rheumatoid attricts, inflammatory bowel disease, psoriasis or asthma. Accordingly, the compositions of this invention exhibit antiasthmatic, antiinflammatory and antiallergic activities. Furthermore, they may be used to identify patients that would be strong candidates for effective treatment with a CARD4 modulator, in pharmacogenomics, or in monitoring the effects of CARD4 therapeutics during clinical trials. The nucleic acid molecule may also be used in forenses or paternity testing. This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC This invention relates to novel single nucleotide polymorphisms within CC the human CARD4 gene. Specifically, it refers to allelic variants of CC CARD4 (NODI), a member of the CED4/Apaf-1 family that is involved in CC caspase-9 induced apoptosis and inflammation. The present invention CC describes a kit for determining the allelic variants of CARD4 polymorphic CC regions of an individual, which can be useful for predicting CC susceptibility, as well as diagnosis, prevention and treatment of various CC disorders including chronic obstructive pulmonary disease, rheumatoid CC arthritis, inflammatory bowel disease, psoriasis or asthma. Accordingly, CC the compositions of this invention exhibit antiasthmatic, antiinflammatory and antiallergic activities. Furthermore, they may be used to identify patients that would be strong candidates for effective CC treatment with a CARD4 modulator, in pharmacogenomics, or in monitoring CC the effects of CARD4 therapeutics during clinical trials. The nucleic acid molecule may also be used in forensics or paternity testing. This coligonucleotide sequence is a human CARD4 DNA oligo comprising an allelic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Ct transmembrane protein) having at least 80% amino acid sequence identity ct oan amino acid sequence chosen from 94 fully defined sequences as given cin the specification (including PRO lacking its associated signal cpeptide). Also included are nucleic acids encoding the sasociated signal comprise. Also included are nucleic acids encoding the proteins comprising the vector and producing PRO, a chimaeric molecule comprising CC mentioned above, a vector comprising PRO, a chimaeric molecule comprising CC pRO fiused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide in a sample suspected of containing PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO337 polypeptide. PRO705. PRO700 or PRO739. PRO493 polypeptide is useful for detecting PRO337 polypeptide in a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for detecting chicactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule is the toxin, radiolabel, or an antibody. The bioactive molecule co a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide, PRO725, cor pro700 or PRO739 polypeptide. PRO4939 polypeptide pro725, and PRO350 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO337 polypeptide, where the cell is killed PRO337 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO359 polypeptide is useful for modulating the biological activity of polypeptide is useful for inhibiting the modulating the biological activity of the cell expressing PRO359 polypeptide is useful for modulating the propertide is useful for modulating the propertide is useful for inhibiting the propertide in the cell expressing PRO350 polypeptide. The cell expressing PR mammals. The present s gene amplification in The invention relates to an isolated PRO polypeptide (secreted certain tumour

                                                                                                                                                                                                                                                                                                                                                               CC in the specification (including PRO lacking its associated signal CC peptide, a PRO extracellular domain with or without its associated signal CC peptide). Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell CC comprising the vector and producing PRO, a chimaeric molecule comprising CC pRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO37 polypeptide is useful for detecting a PRO493 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO703. PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO739. PRO700 or PRO739 polypeptide is useful for detecting PRO3559 polypeptide, and PRO1559 polypeptide is useful for detecting PRO559 polypeptide. PRO739. PRO700 or PRO739 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO339 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide or anti-PRO379 polypeptide is useful for linking a polypeptide or anti-PRO379 polypeptide pRO337 polypeptide or anti-PRO379 polypeptide is useful for modulating the cell expressing PRO337 polypeptide is useful for modulating the polypeptide is useful for modulating the prospective pro739 polypeptide or anti-PRO337 polypeptide is useful for modulating the pro739 polypeptide or anti-PRO337 polypeptide is useful for modulating the pro739 polypeptide is useful for pro739 polypep
                                                                                                                                                                                                                                       8
                                                                                                                                                                                                     문
                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothicate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obcardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inflammation; tumour formation; diabetes; obesity; cardiovascular discorder; hyperlippidaemia; Cushing's syndrome; human; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 4; SEQ ID NO 2768; 985pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human glucocorticoid receptor-specific

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian gluccorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothicate backbone.
                                                                                                                    New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, ob cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antisense oligonucleotide; glucocorticoid receptor; infection; inflammation; tumour formation; diabetes; obesity; cardiovascular disorder; hyperligidaenia; Cushing's syndrome; human; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, ob cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                          to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothicate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are fine antisense oligonucleotides of the invention are also preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothicate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inflammation, tumour formation, diabetes; obesity; cardiovascular disorder; hyperlipidaemia; Cushing's syndrome; human; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.
                                 Nucleotide sequence of a dA20 oligonucleotide.
                                                                                                 22-APR-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 20 BP; 6 A; 9 C; 3 G; 2 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises an antisense oligonucleotides that are targeted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO2003099215-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens

oligonucleotide primer that primes synthesis in a direction toward 5' end of the RNA; converting the single-stranded cDNA into double-stranded cDNA to form a transcription sample containing a cDNA template; eliminating single-stranded oligonucleotide from the transcription sample; and transcribing the cDNA template into RNA using an RNA polymerase. The method is useful for improving RNA polymerase based RNA transcription from a polynucleotide template. The method inhibits the undesired nontemplate derived production of RNA in the transcription reaction. The present sequence represents an oligonucleotide used to exemplify RNA transcription in the presence of single- and double-stranded

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel compounds of 8-80 nucleobases in length targeted to, and which specifically hybridises with, a nucleic acid molecule encoding 3-hydroxy-3-methylglutaryl-Coenzyme A (HMG-COA) reductase, and inhibits the expression of HMG-COA reductase. The novel compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compound can be used to treat disorders by antisense gene therapy. The compounds, compositions and methods are useful for treating a disease or condition associated with HMG-COA reductase, such as a cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and diagnostics for modulating the expression of HMG-COA reductase. This polynucleotide sequence represents an antisense oligonucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New compounds, particularly antisense oligonucleotides targeted to nucleic acid encoding HMG-CoA reductase, useful for treating atherosclerosis, or a disease involving cholesterol metabolism or

The invention relates to novel compounds of 8-80 nucleobases in length targeted to, and which specifically hybridises with, a nucleic acid molecule encoding 3-hydroxy-3-methylglutaryl-Coenzyme A (HMG-CoA) reductase, and inhibits the expression of HMG-CoA reductase. The novel compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compound can be used to treat disorders by antisense gene therapy. The compounds, compositions and methods are useful for treating a disease or condition associated with HMG-CoA reductase, such as a cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and diagnostics for modulating the expression of HMG-CoA reductase. This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
```

The invention relates to novel compounds of 8-80 nucleobases in length targeted to, and which specifically hybridises with, a nucleic acid molecule encoding 3-hydroxy-3-methylglutaryl-Coenzyme A (HMG-COA)

of HMG-CoA

                                                                                                                                                                              The invention relates to novel compounds of 8-80 nucleobases in length targeted to, and which specifically hybridises with, a nucleic acid molecule encoding 3-hydroxy-3-methylglutaryl-Coenzyme A (HWG-COA) reductase, and inhibits the expression of HWG-COA reductase. The novel compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compound can be used to treat disorders by antisense gene therapy. The compounds, compositions and methods are useful for treating a disease or condition associated with HWG-COA reductase, such as a disease or condition associated with HWG-COA reductase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compound can be used to treat disorders by antisense gene therapy. The compounds, compositions and methods are useful for treating a disease or condition associated with HMG-COA reductase, such as a cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and diagnostics for modulating the expression of HMG-COA reductase. This
                                                           cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and diagnostics for modulating the expression of HMG-COA reductase. This polynucleotide sequence represents an antisense oligonucleotide of the

                                                                                                                                                                                                                                                   dispersion of the complex formed between the specimen molecules and the probe molecules is detected and analysed. The probe molecules are capabl of producing fluorescence. This polynucleotide sequence represents an oligo used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method involving forming a laminar flow, by passing into a micro channel, a solution containing the specimen molecules, and a solution containing probe molecules capable of forming a complex with the specimen molecules. The dispersion of the formed complex
                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 1; Page 9; 19pp; Japanese.

                                                                                                                                                                                                                                                                                                    substituted hydrazine, thiourea or infine. The targeting part is transferrin, folate, epidermal growth factor, nerve growth factor, insulin, alpha-fetoportein, galactose, galactorsemine, lactose, mannose, a polyclonal antibody, monoclonal antibody, vitamin B12, ibuproten, cholesterol, low-density lipoprotein, peptide comprising an arginine-glycine-aspartic acid sequence. The oligomeric part is an oligonucleotide, and oligonucleotide analogue, a peptide nucleic acid or a peptide nucleic acid analogue. OC is useful as a prodrug, useful in diagnostics, therapeutics and as research reagents and kits. OC is useful for preventing or delaying infection, inflammation or tumour formation in organisms. The present sequence represents an oligonucleotide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a polyalkyleneamine-containing oligomeric compound (OC). Also described is a compound (C) comprising an oligomeric part, a fusogenic part, and a targeting part; and enhancing the cellular uptake of OC, by conjugating OC to a fusogenic part. In (C), the fusogenic part is covalently linked to the oligomeric part. The targeting part is covalently linked to the oligomeric part, where the fusogenic part is a lipophilic polyamine, or fusogenic part, where the polyalylamine, fusogenic peptide, oligomeric indazole, histidine, pyridine, hydroxylamine, substituted hydroxylamine, hydrazine, substituted hydroxylamine, hydrazine, substituted hydroxylamine, hydrazine, thiourea or imine. The targeting part is a ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polyalkyleneamine-containing oligomeric compound useful for preventing or delaying infection, inflammation or tumor formation
                                                                                                                                                                                                                                                  Sequence

The invention enables the detection of a single nucleotide polymorphism in a human gene. The present sequence represents a primer of the invention.

  The present invention relates to an oligonucleotide anti-sense to e initiation codon, coding region with 2-10 nucleotides of 5'-end and end of nucleic acid target comprising gene(s) chosen from e.g. interleukin (IL)-4 receptor, IL-5 receptor or salts of the oligonucleotide and optionally surfactant operatively linked to the oligonucleotide. The method is useful for preventing or treating a
                                                                                                                                                                                                                                             Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codons and introns of respiratory disease-relevant genes CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             airway inflammation; allergy; asthma; impeded respira cystic fibrosis; acute respiratory distress syndrome;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a polynucleotide isolated from a human gene and is useful for detecting a single nucleotide polymorphism in a human gene or for diagnosing of disease. The invention enables the detection of a single nucleotide polymorphism in a human gene. The present sequence represents a primer of the invention.

The oligonucleotide is useful for production of a medicament for the prevention and/or treatment of a respiratory or lung disease is chosen from airway inflammation, allergy(ies), asthma, impeded respiration, cystic fibrosis (CP), chronic obstructive pulmonary diseases (COPD), allergic rhinitis (AR), acute respiratory distress syndrome (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway obstruction. The present sequence represents an oligonucleotide of the respiratory discontinuous contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nanoparticle;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel method for detecting a nucleic acid CC having at least two portions comprising contacting the nucleic acid with CC at least two types of nanoparticles, such as gold, having attached CC oligonuclectides and observing a detectable change brought about by hybridisation of the oligonuclectides on the nanoparticles with the nucleic acid. The method of the invention may be useful for detecting a nucleic acid, preferably viral RNA or DNA, bacterial DNA, a gene CC associated with a disease, a fungal DNA, synthetic DNA or RNA, a structurally modified natural or synthetic DNA or RNA or a product of a polymerase chain reaction amplification. The detected nucleic acid may be utilised for diagnosis of disease, sequencing of nucleic acid may be CC utilised for diagnosis of disease, sequencing of nucleic acids of the control of comparisor, paternity testing, cell line authentication and monitoring gene therapy. The method for detecting the nucleic acids is based on conserving a colour change with the naked eye and is cheap, fast, simple, and robust, requiring no specialised or expensive equipment. The current sequence is that of the oligonuclectide which is related to a thiol-modified oligonuclectide-gold colloid conjugate probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

cc having at least two portions comprising contacting the nucleic acid with cc at least two types of nanoparticles, such as gold, having attached coligonucleotides and observing a detectable change brought about by cc hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid. The method of the invention may be useful for detecting a nucleic acid, preferably viral RNA or DNA, bacterial DNA, a gene created with a disease, a fungal DNA, synthetic DNA or RNA, or a product of a sesociated with a disease, a fungal DNA, synthetic DNA or RNA, or a product of a created vith a disease, a fungal DNA, synthetic DNA or RNA, or a product of a created vith a disease, a fungal DNA, a synthetic DNA or RNA or a product of a created vith a disease, sequencing of mucleic acid may be created for diagnosis of disease, sequencing of mucleic acids, collised for diagnosis of disease, sequencing of mucleic acids, consists, paternity testing, cell line authentication and monitoring created a colour change with the naked eye and is cheap, fast, simple, conditioned is cheap, fast, simple, conditioned is colour change with the naked eye and is cheap, fast, simple, conditioned is colour change with the naked eye and is cheap, fast, simple, conditioned conjugate probe of the invention which is linked via a thiol colloid conjugate probe of the invention which is linked via a thiol croup to a gold nanoparticle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-APR-2001;

Also included are a composition comprising the compound and a carrier or diluent and a method for screening an antisense compound (by contacting a preferred target region of a nucleic acid molecule encoding EDG1 with one or more candidate antisense compounds comprising at least an 8-nucleobase portion that is complementary to the preferred target region and selecting for one or more candidate antisense compounds that inhibit the expression of a nucleic acid encoding EDG1). The compound, composition and methods are useful for treating a disease or condition associated with EDG1, such as a hyperpoliferative disorder, developmental disorder or a disease or condition arising from aberrant apoptosis. They are also useful in research and diagnostics for modulating the expression of EDG1. Experimental protocols are described but no results are given. The present sequence is a target region of the human cDNA for EDG1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a compound 8-80 nucleobases in length targeted to, and which specifically hybridises with a nucleic acid molecule concoding endothelial differentiation gene 1 (EDG1, a G protein coupled receptor, involved in development, wound healing, tissue regeneration, cellular proliferation, apoptosis, cancer, angiogenesis and cinflammation), and inhibits the expression of EDG1, i.e. is an antisense (AS) oligonucleotide. Also included are a composition comprising the compound and a carrier or diluent and a method for screening an antisense compound (by contacting a preferred target region of a nucleic acid molecule encoding EDG1 with one or more candidate antisense compounds; at least an 8-nucleobase portion that is complementary to the preferred target region and selecting for one or more candidate antisense compounds that inhibit the expression of a nucleic acid encoding EDG1.

CC The compound, composition and methods are useful for treating a disease or condition associated with EDG1, such as a hyperproliferative disorder, developmental disorder or a disease or condition arising from aberrant composition and selecting for one or more candidate antisense compounds. They are also useful in research and diagnostics for both the expression of EDG1. Experimental protocols are described but no results are given. The present sequence is an AS oligonucleotide targeting human EDG1.
                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to phosphorothioate oligonucleotides having nucleoside with 240 modification are prepared by phosphitylating 5'-hydroxyl of a nucleic acid moiety having a nucleoside with 2' modification in an acetonitrile containing solvent mixture to form a phosphite intermediate; and oxidising the phosphite intermediate with an acetyl disulfide in an acetonitrile for a time to effect conversion of the phosphite intermediate to phosphorothioate. The invented method achieves high yields and greater efficiency. The present sequence is sulphurised oligonucleotide used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Preparation of phosphorothioate oligonucleotides involves oxidizing phosphite intermediate with acetyl disulfide in acetonitrile for time

The invented method achieves high yields and greater efficiency. The present sequence is sulphurised oligonucleotide used in the exemplification of the inventic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 20 BP; 0 A; 0 C; 0 G; 20 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Preparation of phosphorothicate oligonuclectides involves oxidizing phosphite intermediate with acetyl disulfide in acetonitrile for time effect conversion of phosphite intermediate to phosphorothicate.
  Novel intercalator, useful as electrochemical double stranded DNP
                                                                                                                                                                                                                                                                                                                                                                JP2004024114-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Electrochemical detection intercalator-related DNA

The intercalator of the invention may be useful for the electrochemical detection of a gene, as an electrochemical double stranded DNA detection reagent and as an intercalator for inhibiting the influence of mismatch DNA and single stranded DNA. The intercalator enables the transmission of electronic transition between two base pairs to occur efficiently. The current sequence is that of the electrochemical detection intercalator-related DNA 2 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              phosphorothioate; 2', MOE; breast cancer; dyslipidaemia; atherosclerosis; low HDL; high density lipoprotein; high LDL; hypercholesterolaemia; gall stone, triglyceridaemia; obseity; hepatitis; hepaticis; hepatice; hepatice;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 20 BP; 19 A; 0 C; 1 G; 0 T; 0 U; 0 Other;

Ct the expression of liver related homologue-1 (LRH1) and splice variants thereof. Specifically, it refers to compositions 8-30 nucleobases in CC length that target a portion of an active site on the nucleic acid CC molecule encoding LRH1 (also known as NR5A2). LRH1 is a monomeric orphan nuclear receptor protein that functions as a tissue specific transcription factor. The present invention describes antisense CC linkage, a phosphorothioate linkage; at least one modified internucleoside (CC linkage, a phosphorothioate linkage; at least one modified sugar moiety, a 2'-O-methoxyethy1 (2' MOS) and at least one modified nucleobase, a 5-c methylcytidine. These antisense compounds are useful for treating or CC diagnosing a disease associated with LRH1, such as breast cancer, CC dyslipidaemia, atheroselerosis, low HDL (high density lipoprotein), high cc LDL (low density lipoprotein), hypercholesterolaemia, gall stones, CC triglyceridaemia, obesity, hepatitis B virus-mediated acute or chronic CC with aromatase activity. Accordingly, these compositions exhibit coylostatic, antillipaemic, antiarterioselerotic, anorectic, hepatitis as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit CC coligonucleotide sequence is an antisense DNA oligo used to modulate the expression of the human LRH1 protein of the invention.
New antisense oligonucleotides targeted to a nucleic acid encoding related homologue-1 (LRH1), useful for treating breast cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2004-083058/08

                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cc length that target a portion of an active site on the nucleic acid completely that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NR5A2). LRH1 is a monomeric orphan cc nuclear receptor protein that functions as a tissue specific transcription factor. The present inventions as a tissue specific critical composition of a phosphorothicate linkage; at least one modified internucleoside components of the present invention describes antisense compounds are useful for treating or composing a disease associated with LRH1, such as breast cancer, cc diagnosing a disease associated with LRH1, such as breast cancer, cc dyslipidaemia, atherosclerosis, low HDL (high density lipoprotein), high critical compositions associated with LRH1, such as breast cancer, criglyceridaemia, obesity, hepatitis B virus-mediated acute or chronic hepatitis, as well as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit cotypostatic, antilipaemic, antiarteriosclerotic, anotatic, hepatotropic, libnolytic, antinifiammatory and virucidal activities. This colliponucleotide sequence is an antisense DNA oligonucleot to modulate the

                                                                                                                          This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LNH1) and splice variants (C thereof. Specifically, it refers to compositions 8-30 nucleobases in C length that target a portion of an active site on the nucleat acid combecule encoding LNH1 (also known as NR5A2). LNH1 is a monomeric orphan C nuclear receptor protein that functions as a tissue specific transcription factor. The present invention describes antisense coligonucleotides that comprise at least one modified internucleoside colinkage, a phosphorothicate linkage; at least one modified sugar moiety, a 2'-O-methoxyethyl (2' MOS) and at least one modified nucleobase, a 5-cc diagnosing a disease associated with LNH1, such as breast cancer, cyspilodemia, atheroscolerosis, low HDL (high density lipoprotein), high critiquidemia, atheroscolerosis, low HDL (high density lipoprotein), high critiquidemia, atheroscolerosis, low HDL (high density lipoprotein) conspilored modified nucleosise, as well as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit corresponding conjuncted sequence is an antisense DNA oligo used to modulate the expression of the human LNH1 protein of the invention.

thereof. Specifically, it refers to compositions 8-30 nucleobases in length that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NR5A2). LRH1 is a monomeric orphan nuclear receptor protein that functions as a tissue specific transcription factor. The present invention describes antisense oligonucleotides that comprise at least one modified internucleoside linkage, a phosphorothicate linkage, at least one modified sugar moiety, a 2'-O-methoxyethyl (2' MOE) and at least one modified nucleobase, a 5-methylcytidine. These antisense compounds are useful for treating or diagnosing a disease associated with LRH1, such as breast cancer, dyslipidaemia, atherosclerosis, low HDL (high density lipoprotein), high LDL (low density lipoprotein), high
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense oligonucleotides targeted to a nucleic acid encoding related homologue-1 (LRH1), useful for treating breast cancer, dyslipidemia, atherosclerosis, hypercholesterolemia, or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                           This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRH1) and splice variants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               modified_base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human; ss; liver related homologue-1; LRH1; NR5A2; antisense;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-JUL-2003;

Accordingly, these compositions exhibit cytostatic, antilipaemic, antiarteriosclerotic, anorectic, hepatotropic litholytic, antinflammatory and virucidal activities. This oligonucleotide sequence is an antisense DNA oligo used to modulate the expression of the human LRHI protein of the invention.
                                                                                                                          New antisense oligonucleotide for modulating endothelial expression, for diagnosing, preventing or treating e.g. high density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                          19-JUL-2002; 2002US-0397106P

(ADJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipse in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are

The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence (ADJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipase in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are used for diagnostics, prophylaxis, or as research reagents or kits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense oligonuclectide for modulating endothelial lipase expression, for diagnosing, preventing or treating e.g. dyslipihigh density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antilipaemic; Cardiovascular; Analgesic; Antianginal; Antisense therapy; Human; Endothelial Lipase; dyslipidaemia; high density lipoprotein; HDL; cardiovascular disorder; metabolic syndrome X; ss.

/note= "This oligonucleotide has a phosphorothicate
backbone and 2-'methyoxyethy1 (2'-MOE) wings at the 5'
and 3' ends, which are 4 nucleotides in length. Also all
cvtidine residues are 5-methylcytidines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Þ

                                                                                                                                                                                                                                                            The present invention relates to antisense oligonuclectides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence (ADJ25517), where the antisense oligonuclectide specifically hybridises with and inhibits the expression of EL. The antisense oligonuclectides are useful for modulating the expression of endothelial lipase in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonuclectides are used for diagnostics, prophylaxis, or as research reagents or kits.
                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense oligonucleotide for modulating endothelial lipase expression, for diagnosing, preventing or treating e.g. dyslipidemia, high density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antilipaemic; Cardiovascular; Analgesic; Antianginal; Human; Endothelial Lipase; dyslipidaemia; high density cardiovascular disorder; metabolic syndrome X; 88.

The compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache, seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nav1.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache;
Chimeric phosphorothioate oligonucleotide to target Nav1.3 #8196.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Navl.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navl.3. The compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeninal neuropathy, arthritic pain, acute pain, diabetic neuropathy, trigeninal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache, seizure disorder such as childhood seizure disorder. Including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nav1.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.
                                                                                                       Nav1.3; Analgesic; Nootropic; Neuroprotective; diabetic neuropathy; arthritic pain; migraine infantile epilepsy; ataxia; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to an antisense compound targeted to a concleic acid molecule encoding Navl.3, where the antisense compound compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, chabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epileps; or ataxia. The present sequence represente a chimeric phosphorothoate oligonucleotide with company and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target of different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mil-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'MOB wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                              The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 4; SEQ ID NO 2303; 417pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

Claim 4; SEQ ID NO 2223; 417pp; English.

The present invention relates to an antisense compound targeted to nucleic acid molecule encoding Navl.3, where the antisense compound

The present sequence represents a chimeric phosphorothicate oligonucleotide with 2/MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target
                                            associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonuclectide with
                                                                                                                                                                                                                                                                                                                   The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2004-203785/19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-FEB-2004

                                                                                                                         nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, lower back pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonuclootide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Nav1.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human Nav1.3 expression, the oligonucleoti different regions of the human Nav1.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure
                                                                       Sequence
                                                                                                            different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                      The present invention relates to an antisense compound targeted

                                                                                                                                                                                                                                                                                                The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Nav1.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

CC composition comprising the antisense compound, a method of inhibiting the compression of VCC-1 in cells or tissues comprising contacting the cells or tissues with the antisense compound and a method of treating a human CC having a disease or condition associated with VCC-1 comprising contacting a human CC daministering the antisense compound to an animal to inhibit expression CC of VCC-1. The antisense oligonuclectide comprises at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also CC comprises at least one modified sugar moiety, preferably a 2'-O-CC methoxyethyl sugar moiety, and at least one modified nucleobase, CC specifically a 5-methylcytosine. The antisense oligonucleotide preferably is a chimeric oligonucleotide. The antisense compound is useful for CC an immunological disorder, a cardiovascular disorder, a neurological CC disorder, ischaemia, reperfusion injury, cancer or an angiogenic CC antisense oligonucleotides may also be used for wound healing, for treating periodontal diseases, for gut protection of treating periodontal diseases, for gut protection of treating periodontal diseases, for gut protection of corresponant, for treating periodontal diseases, for gut protection of corresponant of atrial fibrillation. This sequence represents an antisense coligonucleotide targeted to DNA encoding the human VCC-1 polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunological disorder; cardioväscular disorder; neurological disorder; ischaemia; reperfusion injury; cancer; angiogenic disorder; haemangioma; tumour angiogenesis; rheumatoid arthritis; atherosclerosis; psoriasis; fibrosis; myocardial infarction; wound healing; bone fracture; cartilage damage; tissue regeneration; organ regeneration;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an antisense compound targeted to a nucleic acid molecule encoding human vascular endothelial growth factor (VEGP) coregulated chemokine-1 (VCC-1), and which specifically hybridises with and inhibits the expression of VCC-1. The invention also relates to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 4; SEQ ID NO 517; 336pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense compounds targeted to a nucleic acid molecule encoding vascular endothelial growth factor co-regulated chemokine-1 (VCC-1), useful for treating VCC-1-associated disorders, e.g. diabetes or a neurologic disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This oligonucleotide sequence is a human clone specific PCR primer used in an exemplification of the
  Clone specific PCR primer to amplify human full length cDNA SeqID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New oligonucleotide primers length human cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           oligo-capping method; ss; PCR; primer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, a glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5° and 3° ends using the oligo-capping method. This oligonucleotide sequence is a human clone specific PCR primer used in an exemplification of the

CC polypeptide in a sample suspected of containing PRO493 polypeptide.

CC Similarly, PRO4933 polypeptide is useful for detecting PRO317

CC polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO3159 polypeptide, and PRO1559 polypeptide is useful for detecting PRO3159 polypeptide.

CC pRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for linking a CC bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive collecule is the toxin, radiolabel, or an antibody. The bioactive molecule causes death of the cell expressing PRO337 polypeptide is useful for linking a CC bioactive molecule to a cell expressing pRO4993 polypeptide. PRO725, CC pRO700 or PRO739 polypeptide are useful for linking a bioactive molecule to a cell expressing pRO4939 polypeptide is useful for linking a bioactive molecule collecule to a cell expressing pRO4939 polypeptide is useful for linking a bioactive molecule to a cell expressing pRO725, CC pRO700 or PRO739 polypeptide. PRO4939 polypeptide or anti-PRO337

CC polypeptide is useful for modulating at least one biological activity of the cell expressing pRO4939 polypeptide is useful for modulating the biological activity of the cell expressing pRO4939 polypeptide is useful for modulating the profice and pRO1559 polypeptide or anti-PRO725, CC pRO700 or PRO739 polypeptide or anti-PRO725, pro700 or PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO755, anti-PRO700 or anti-PRO725, pro700 or pro725, pro700 or pro739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, pro700 or pro725, p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     08-MAR-1999;
